

# MAKE A DEEP SEA DIVER'S HELMET

Find a usable cardboard box that fits over your child's head, but doesn't slip over their shoulders

Draw round a plate to make a porthole at the front and cut the shape in the middle carefully

(Be careful to keep sharp objects away from children)

Keeping the front and back flaps at the bottom of the box, cut off the two side flaps or push them up into the box.

Glue on any available junk to accessorise your helmet and decorate.

What will you see when you swim outside your submarine on your underwater adventure?

Remember to walk with weighted shoes like a real deep sea diver!
